

## AUTHORIZATION FOR DIAGNOSTIC OCULAR HEALTH TESTS

We routinely perform the following tests during the course of the examination process. However, since your insurance company will NOT cover them, you have the option of having them performed (as an out-of-pocket expense).

These “Wellness Tests” are important in developing a baseline of your eye health, as well as, identifying a timely follow-up strategy to track eye changes, issues or disease.

### 1. OPTOMAP or Cannon Photo for Retinal Examination - \$45.00

This test photographs the back of your eye looking for retinal detachments, macular degeneration and other health problems. Dilating your eye may not be necessary after this test and your eyes won't be blurred the rest of the day.

### 2. OCT Scan - \$30.00

The Optical Coherence Tomography test measures the thickness of the nerve fiber layer & aids in early glaucoma and retinal disease detection. It allows the Doctor to see things he cannot see just by looking at your eyes.

### 3. Anterior Segment Photography - \$20.00

Allows us to clinically examine & demonstrate to you the specific concerns with your eyes & eyelids that are contributing to your dry eye problem.

I AGREE to do the testing & AGREE to pay the additional fees today.

or

I Do Not wish to have any of the above tests today.
