AUTHORIZATION FOR DIAGNOSTIC OCULAR HEALTH TESTS

We routinely perform the following diagnostic tests during the examination process. However, since your insurance company will NOT cover these tests, you have the option of having them performed (as an out-of-pocket expense).

These "Wellness Tests" are important in developing a baseline of your eye care health, as well as, identifying a timely follow up strategy to track eye changes, issues, or disease.

1. OPTOMAP of Cannon Photo for Retinal Examination \$45.00

This test photographs the back of your eye looking for retina detachments, macular degeneration, and other health problems. Dilating your eye may not be necessary after this test and your eyes won't be blurred the rest of the day.

2. OCT Scan \$30.00

The Optical Coherence Tomography test measures the thickness of the nerve fiber layer and aids in early glaucoma and retinal disease detection. It allows the Doctor to see things he / she cannot see just by looking at your eyes.

3. Anterior Segment Photography \$20.00

Allows us to clinically examine and demonstrate to you the specific concerns with your eyes and eyelids that are contributing to your dry eye problems.

I AGREE to do this testing and AGREE to pay the additional fees today.

I do not wish to have an of the above tests today.
